Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/528,665

Applicant(s)

HARRINGTON ET AL.

Examiner

SHEELA C. CHAWAN

Art Unit

2624

Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 March 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-27 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-10, 15-18 and 21-27 is/are rejected.
- 7) ☒ Claim(s) 19 and 20 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 21 March 2005 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/083)
- Paper No(s)/Mail Date 12/26/06, 6/9/05
- 4) ☐ Interview Summary (PTO-413)
- Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Preliminary Amendment

1. Preliminary amendment filed on 3/21/05 has been entered.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 12/26/06, 6/9/05 the information disclosure statement is being considered by the examiner.

Drawings

3. The Examiner has approved drawings filed on 3/21/05.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1- 10, 15-18 and 21- 27, are rejected under 35 U.S.C. 102(e) as being anticipated by Roehrig et al., (US.2002009702 A1, Listed in IDS).

As to claim 1, Roehrig discloses a method for displaying results of a computer aided detection (CAD) analysis of a digital image (abstract), the method comprising:

- i) analyzing the digital image using CAD analysis to identify one or more CAD-

detected abnormalities (paragraph 0031, 0034);

ii) generating one or more coded descriptors for said CAD-detected abnormalities wherein said coded descriptors provide information on one or more criteria used by said CAD analysis to identify said CAD-detected abnormalities (paragraph 0056, 0059 and 0072); and

iii) displaying said digital image with the one or more coded descriptors (paragraph 0057, 0058).

As to claim 2, Roehrig discloses the method as claimed in claim 1 wherein said digital image is a digitized image of an X-ray film (paragraph 0030, fig 5, 502).

As to claim 3, Roehrig discloses the method as claimed in claim 1 wherein said digital image is a digital mammogram (paragraph 0031, 0051).

As to claim 4, Roehrig discloses the method as claimed in claim 1 further comprising visually analyzing said digital image to identify one or more user-detected abnormalities, said visual analysis being performed before said step of displaying and wherein said user-detected abnormalities are re- assessed based on said information provided by said coded descriptors (fig 5, 506, paragraph 0034, 0045, 0053, 0056, 0059 and 0072).

As to claim 5, Roehrig discloses the method as claimed in claim 4 wherein said digital image is a digitized image of an X-ray film and wherein said visual examination is performed on said X-ray film (paragraph 0075).

As to claim 6, Roehrig discloses the method as claimed in claim 1 further comprising visually analyzing said digital image to identify one or more user-detected

abnormalities said visual examination being performed with said coded descriptors being displayed simultaneously such that a user can refer to said coded descriptors while performing said visual analysis (paragraph 0009, 0053 and 0075).

As to claims 7 and 22, Roehrig discloses the method as claimed in claim 6 wherein said digital image is a digitized image of an X-ray film and wherein said visual examination is performed on said X-ray film (paragraph 0043, step 100, paragraph 0009 and 0053).

As to claims 8 and 23, Roehrig discloses the method as claimed in claim 1 wherein said one or more coded descriptor displayed in the image is selected by a user (paragraph 0049, step 804, paragraph 0043).

As to claims 9 and 10, Roehrig discloses the method as claimed in claim 1 wherein said coded descriptors also provide information on probability that said CAD-detected abnormalities are indicative of a disease state (note, visual markings could be used to indicate the abnormalities, paragraph 0045).

As to claim 15, Roehrig discloses the method as claimed in claim 14 wherein said highlighted feature is selected from size, brightness, location, density, number and length of spicules (paragraph 0050, note last sentence providing a closeup view or selected area of the image).

As to claim 16, Roehrig discloses the method as claimed in claim 14 wherein said highlighted feature comprise individual calcifications within a micro- calcification cluster (fig 9, paragraph 0051).

As to claims 17 and 18, Roehrig discloses the method as claimed in claim 10 wherein said visual markers are color coded according to said probability that the CAD-detected abnormalities are indicative of a disease state (paragraph 0051 element 910 in fig 9).

As to claim 21, Roehrig (902) discloses a method for identifying abnormalities in a mammogram the method comprising:

i) analyzing said mammogram using Computer Aided Detection (CAD) analysis to produce CAD results (fig 5, element 504, paragraph 0044);

ii) displaying said mammogram and a corresponding image of said mammogram comprising said CAD results (fig 5, element 506, paragraph 0044);

iii) visually analyzing said mammogram to identify one or more user-detected abnormalities said visual examination being performed with said corresponding image of said mammogram comprising CAD results being displayed simultaneously such that a user can refer to said CAD results while performing said visual analysis (paragraph 0045).

As to claim 24, Roehrig (902) discloses a system for displaying results of a computer aided detection (CAD) analysis of a digital image said system comprising:

a digital image source (paragraph 0043, CAD system 100);

a processor for analyzing said digital image using CAD analysis to identify CAD-detected abnormalities (paragraph 0044);

a processor for extracting criteria used in said identification of CAD-detected abnormalities (paragraph 0044 step 804);

a processor for associating coded descriptors with said criteria and said abnormalities (paragraph 0044, 804 generates bit of abnormal regions which are associated with digitized mammograms);

a display for displaying said digital image and said coded descriptors (paragraph 0044, viewing 104 at step 506).

As to claim 25, Roehrig (902) discloses the system as claimed in claim 24 wherein said display comprises more than one display area (paragraph 0044, suspicious areas).

As to claim 26, Roehrig (902) discloses the system as claimed in claim 25 wherein a digital image is displayed in a first display area without coded descriptors and said digital image is displayed in a second display area with coded descriptors (step 908, without color coding , paragraph 0051, after step 910 color coding).

As to claim 27, Roehrig (902) discloses the system as claimed in claim 24 further comprising a means for displaying an analog X-ray film (paragraph 0052, actual radiographic film (analog film), paragraph 0053 radio logic image on a mammographic X-ray film screen imaging system).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Claims 11 - 14, are rejected under 35 U.S.C. 103(a) as being unpatentable over Roehrig et al., (US.2002009702 A1, Listed in IDS), as applied to claims 1- 10, 15-18 and 21- 27, above and further in view of Roehrig et al., (US. 7,054,473 B1) .

Regarding claim 11, Roehrig discloses method and system for the display of regions of interest in medical images. Roehrig is silent about wherein the alpha-numeric information is based on Breast Imaging Reporting and Data System (BI-RADS).

Roehrig (473) disclose method and apparatus for an improved computer aided diagnosis system. The system comprises of :

wherein the alpha-numeric information is based on Breast Imaging Reporting and Data System (BI-RADS), (column 3, lines 47- 54, note, data system for storing and retrieving digitized mammograms and making a report on the diagnosis).

Therefore, it would have been obvious to one of ordinary skill in the art at the

time of the invention to have modified Roehrig (702) to include wherein the alpha-numeric information is based on Breast Imaging Reporting and Data System (BI-RADS). It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Roehrig (702) by the teaching of Roehrig (473) in order to determine a uniform display quality regardless of the original modality of the image (as suggested by Roehrig (473) at column 1, lines 50- 54).

As to claim 12, Roehrig (473) discloses the method as claimed in claim 10 wherein said alpha-numeric information is a sentence describing in medical terms said CAD-detected abnormalities (note, abnormalities indicated by annotation or labeling or highlighting the ROI, column 3, lines 47- 54) .

As to claim 13, Roehrig (473) discloses the method as claimed in claim 10 wherein said visual markers comprise border delineations of regions (column 6, lines 44- 59 , the grey scale values are used to identify abnormal tissue for normal tissue using pixel intensity variations).

As to claim 14, Roehrig (473) discloses the method as claimed in claim 10 wherein said visual markers comprise one or more highlighted feature used by CAD for determining likelihood of abnormality (note highlighting corresponds to tagging features , column 3, lines 33-35).

Allowable Subject Matter

6. Claims 19-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Non of the prior art on record teaches or fairly suggests, wherein said visual markers can be displayed with varying degrees transparency as required by claim 19 Claim 20 depend from the objected base claim 19 and therefore they are objected for the same reasons.

Contact Information

17. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sheela C Chawan whose telephone number is. 571-272-7446. The examiner can normally be reached on Monday - Thursday 7.30 - 6.00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eileen Lillis can be reached on 571-272-6928. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
